ANDREAS STREHLER

UHRMACHER

Sauterelle | Regulated Energy

Movement engineered, designed and manufactured by Andreas Strehler | patented remontoir d'égalité: every second the visible satellite gear provides exactly the same amount of energy to the seconds wheel and at the same time displays the seconds as dead-beat seconds. The energy is accumulated by a star-shaped satellite through a spring which is re-loaded every second. Then, the satellite wheel is released and transfers its energy to the balance. The satellite wheel then rests again against the palette-stone. This planetary design of the respective wheels is a first in a wristwatch | 156 parts | bevelled edges | hand decorated movement | for more information write us on info@astrehler.ch or visit us on www.astrehler.ch
